

The CDC recommends hand-washing and facemasks to help reduce the spread of H1N1 (Swine Flu)¹

Who are we to argue with that advice?

Barrier Masks

For years, Hibiclens®, Hibistat®, and Barrier® have been in the business of helping prevent communicable diseases.

- Hibiclens and Hibistat are effective against influenza AH1N1 virus strain A/Swine/Iowa/15/30 (ATCC #VR-333)².
- Hibiclens and Hibistat contain Chlorhexidine Gluconate (CHG) which bonds to the skin and continues to actively kill germs for up to 6 hours after washing³, providing the best protection available.
- Ill persons should wear a surgical mask to contain secretions when outside of the patient room⁴. Barrier facemasks can help prevent this type of cross contamination.

Take steps to help prevent infection. Call 1.800.843.8497 or visit www.molnlycke.com to order or find out more information.
