CleanCare® and BioSoft® Sanitizers – An important step towards meeting current hand hygiene protocols

Proper skin antiseptics has always been an essential part of good hand hygiene. And, with the upcoming October 1st rate change looming for hospital reimbursements related to the increased cost of care from specific hospital-acquired conditions, there will be a renewed emphasis on compliance with the CDC's *Guidelines for Hand Hygiene in the Healthcare Setting* (October 2002).

To help your facility comply with these guidelines, Cardinal Health's **CleanCare®** 3-step hand hygiene system includes a variety of **CleanCare®** and **BioSoft®** hand sanitizers that help create a healthier environment for both healthcare professionals and patients. The sanitizers employ an alcohol-based antimicrobial formulation that absorbs quickly into the skin and protects, restores and moisturizes hands. These properties make **CleanCare®** and **BioSoft®** hand sanitizers an ideal choice for achieving an important step in your hand hygiene regimen.
